

PRODUCT INFORMATION

Reference : FD-050-095

Technologies : Mifare Plus, Mifare Classic, Desfire, BLE

DESCRIPTION

To ensure optimal access control security, FDI keys, passes, cards and remote controls use Mifare Plus tags secured by an AES 128 bit key.

2-Smart readers process this security and ignore other keys/passses.

When it is necessary to reuse existing Mifare keys/passses (light, Classic, Plus or Desfire), the FD-050-095 activation card removes the security from the readers so that keys/passses can be used.

A FD-050-095 card is required per controller to open all these readers (max. 6).
